

AIPM Rodent Control - Safe Use of Bromadiolone 0.005% Rodent Cake

Bromadiolone 0.005% Rodent Cake

Rodent Cake containing Bromadiolone 0.005% is a second-generation anticoagulant rodenticide used by AIPM for effective control of rats and mice.

It works by causing internal bleeding in rodents after consumption, leading to their elimination within 3–5 days. AIPM ensures safe and responsible application following Indian pest control standards to protect customers, pets, and the environment.

How to Use Bromadiolone 0.005% Rodent Cake (AIPM Procedure)

Step 1 – Inspection

AIPM technician inspects the premises to identify rodent activity, runways, droppings, burrows, and food sources.

Step 2 – Secure & Safe Positioning

The baits are kept away from children, pets, and food items.

Technician ensures the cake is not touched with bare hands—always uses gloves.

Step 3 – Follow-up Check

AIPM technician revisits or guides the customer to monitor consumption and remove dead rodents using proper PPE.

Step 4 – Disposal

Consumed or uneaten baits are replaced. Dead rodents are collected using tools and disposed safely as per municipal guidelines.

Do's & Don'ts for Technician

Do's – Technician

- ✓ Use PPE (gloves, mask)
- ✓ Place bait only outside and hidden areas
- ✓ Wash hands and tools after service

Don'ts – Technician

- ✓ Avoid placing bait inside of Premises
- ✓ Do not leave bait in open/pet areas
- ✓ Do not use excess bait at one spot
- ✓ Do not dispose dead rodents in garbage

Do's & Don'ts for Customer

Don'ts- Customer

- Do not allow children to touch placed bait.
- Do not leave food items uncovered overnight
- Do not shift the bait kept by technician.
